

sovereign-agent-gate (v6.1) 🦅

An autonomous, time-locked Bitcoin Lightning auction framework and flat-file text ledger engineered exclusively for non-human callers (AI agents, enterprise corporate crawlers, and LLM scrapers). This framework acts as an external financial filter, treating your local VRAM processing loops as a scarce commodity and forcing bots to settle transaction tolls via native LNDHub micro-payments.

🛠️ The Architecture & The Sovereign Room Rules

This architecture operates on a strict 24-hour chronological countdown, completely decoupled from human-facing web interface channels:
